

## About Us

IT Management Solutions provides a "Virtual IT Department" for small to medium sized businesses by supplying the knowledge to answer all your current and future computer and network requirements. Our goal is to provide our clients with the proper solutions to enable their business to perform at its fullest.

IT Management Solutions works proactively to anticipate challenges to your network, leaving your employees free to focus on their job instead of the technology behind it. With our network monitoring our staff are often notified of issues and have started work on a resolution before you arrive at the office. During regularly scheduled visits a dedicated local team resolves network, server, and desktop issues. Among other things, we also check all logs to verify that items such as anti-virus and backups are working properly.

IT Management Solutions also prides itself in being able to provide cost effective solutions for our clients. We offer solutions from Scalix for email, WatchGuard for security, and Intradyn for backup and email regulatory compliance. We also have available a long list of applications that are web based.

IT Management Solutions continues to lead the way in innovative and creative technological solutions. Over 10 years ago we started stressing the importance of firewalls on internet connections with our clients; several years later they became a "must have" and cornerstone of internet security. Almost 5 years ago we started emphasizing the importance of web based applications, due to their ease of manageability and remote access. Now the majority of applications are available as web based. But newer does not always mean better. A lot of companies don't need something new, they just need what they have to work reliably. If this is the case we will tell you so and create a plan to get your network functioning reliably and efficiently with minimal expense.

IT Management Solutions treats your network as if it were our own, providing support so that you don't have to.

Please contact us for any immediate concerns or questions at (817) 380-1952.
