

VoiP

VoIP (Voice over IP) is one of the latest technologies to shake up entire industries. Did you know that the major telco's are already working on moving their equipment to VoIP and phasing out POTS lines? VoIP offers companies many advantages over the traditional POTS lines. VoIP systems have more features, are easier to configure and manage, and can offer savings of up to 70% compared to the older POTS based key systems.

We can design and implement a VoIP system that meets your current and future needs - whether you are a company of 1 or 100. Our systems are based on leading VoIP providers such as Cisco-Linksys and Epygi. We also have several solutions based on asterisk that offer almost unlimited options at a price that is hard to believe.

Give us a call at (817) 380-1952 to see how VoIP can help you save costs and increase productivity.
